

#81 Eric de Bony : The neuroblastoma specific lincRNA NESPR controls **noradrenergic** cell identity

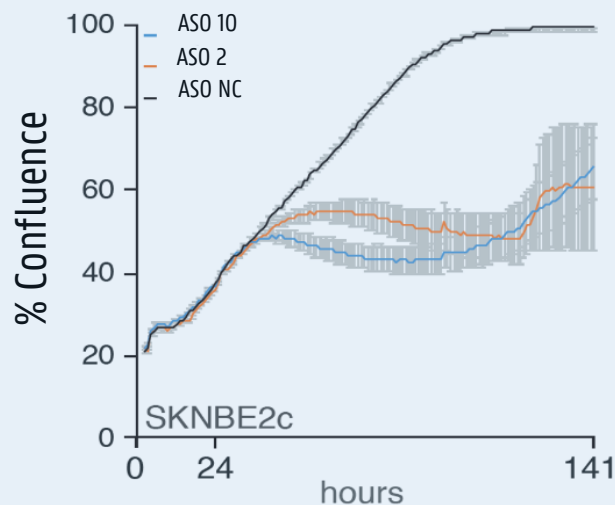

NESPR locus neighbor's PHOX2B locus

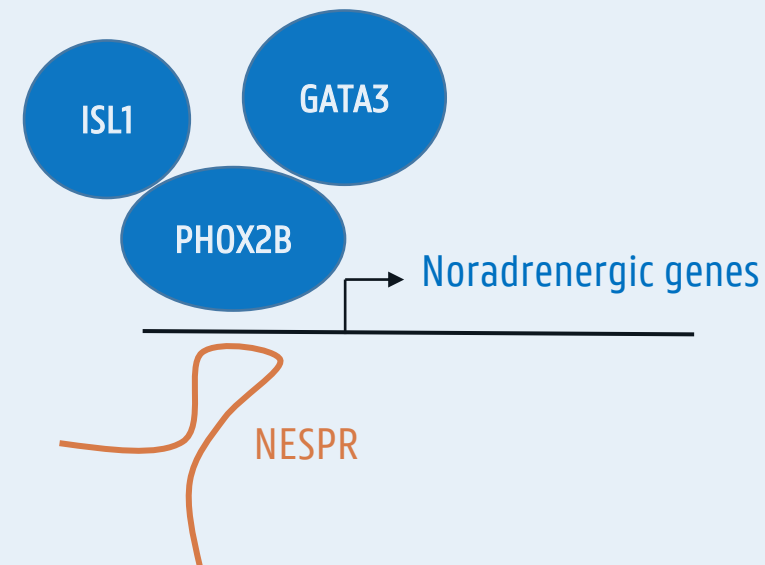

Noradrenergic identity determination

NESPR regulates PHOX2B

NESPR is required for noradrenergic cell survival

NESPR & noradrenergic TFs DNA-binding overlaps

Noradrenergic core regulatory circuitry should be extended to include NESPR.

New node, new target ?
