

RNA society meeting 2022

circRNA detection tool benchmarking

Marieke Vromman
OncoRNALab, Ghent University, Belgium

CENTRUM MEDISCHE
GENETICA GENT

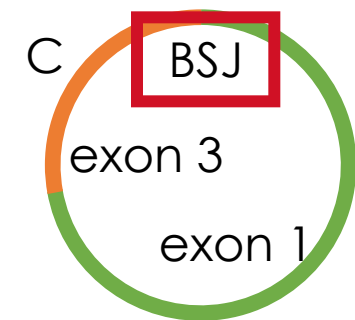

circular RNAs are formed through back-splicing

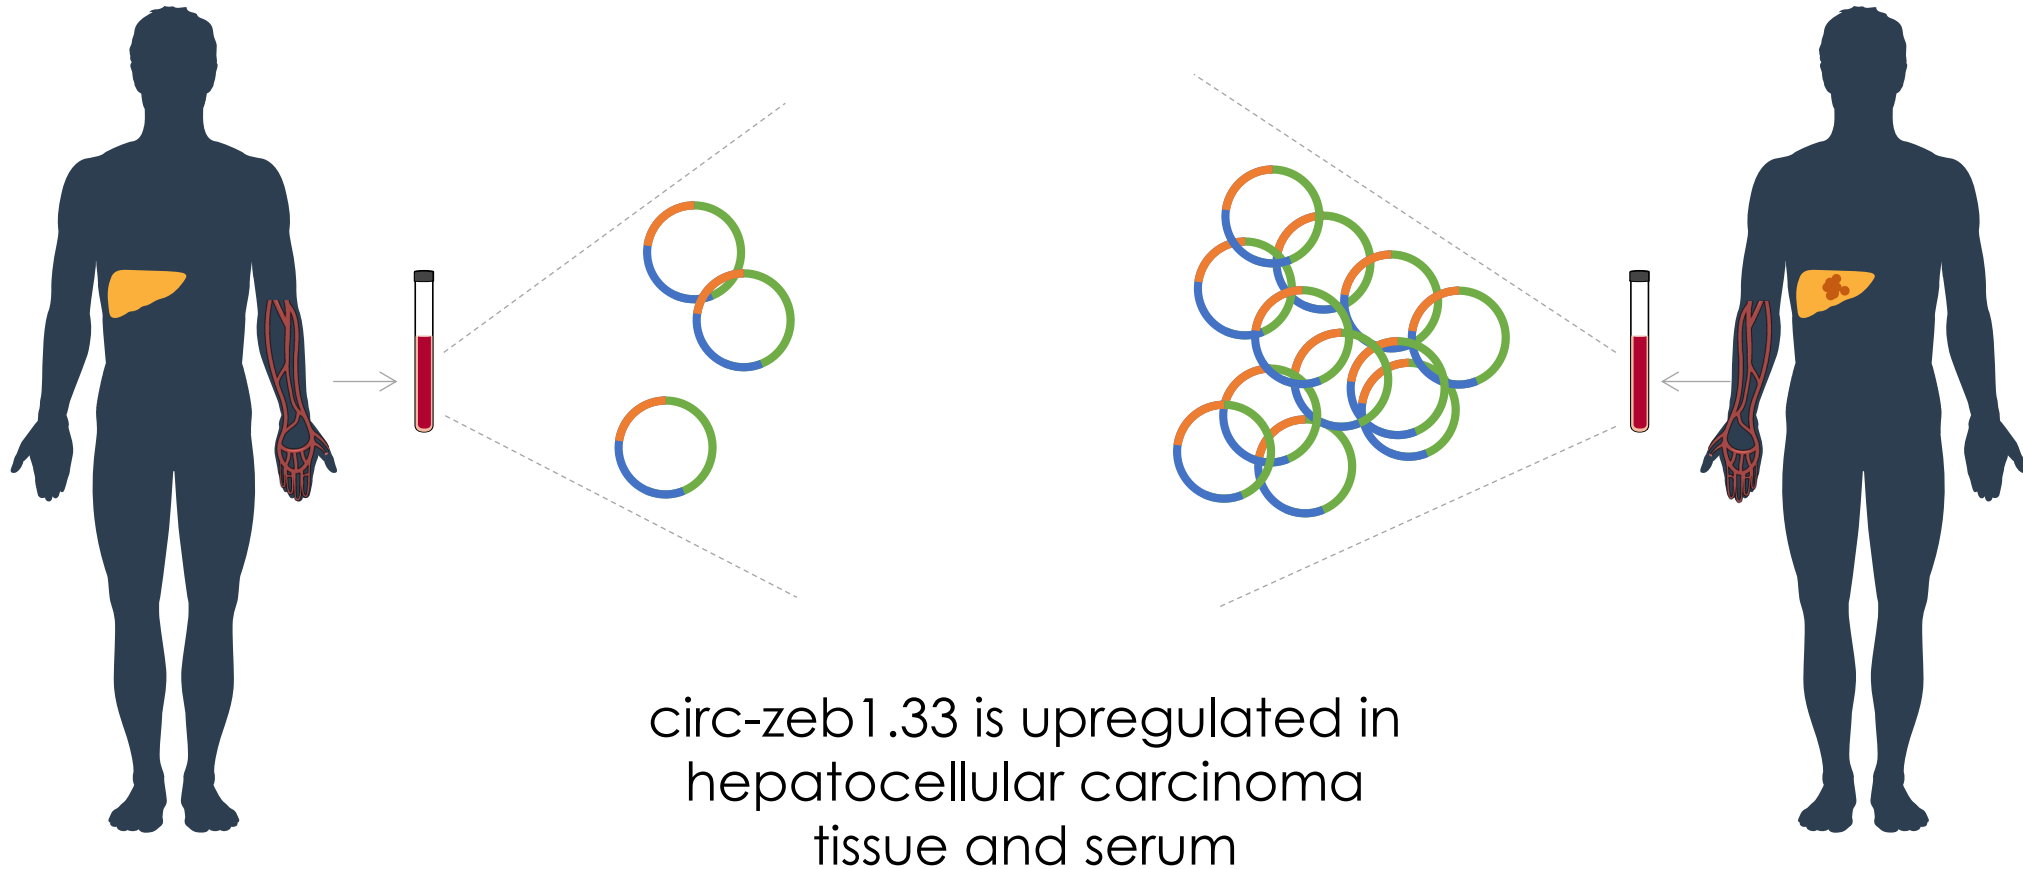

unique circRNA feature: backsplice junction (BSJ)

↓ backsplicing

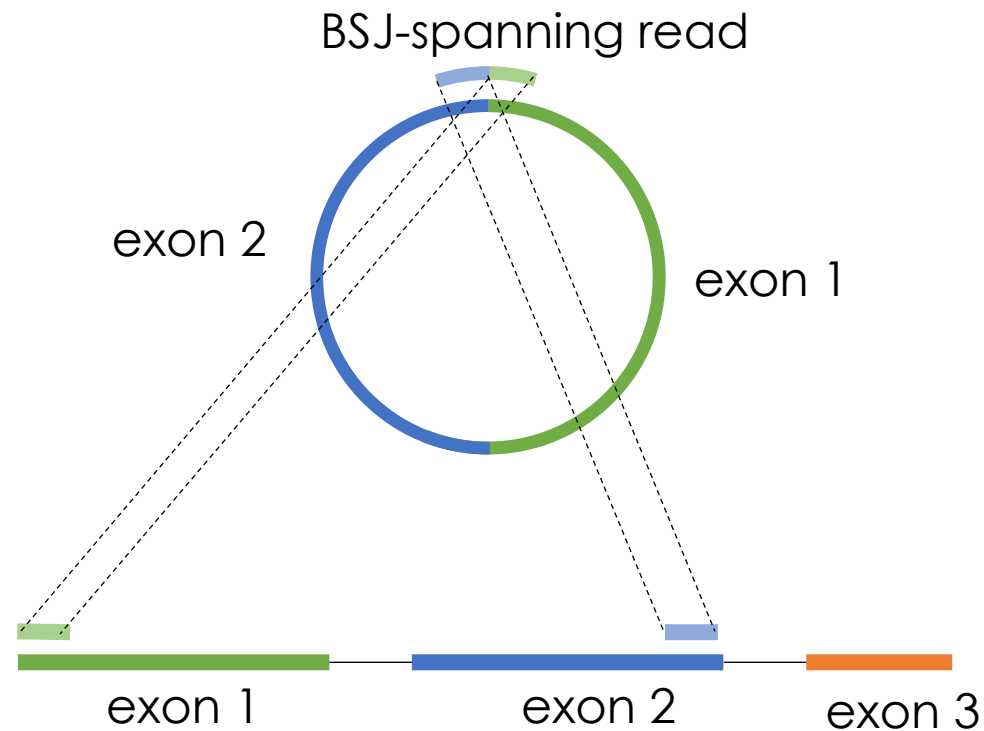

circRNAs have the potential to serve as cancer biomarkers

circRNA detection based on RNA sequencing data

- step 1: mapping
- step 2: circRNA detection in unmapped reads

which algorithm to use for circRNA detection?

- > 40 circRNA prediction tools ⇒ lack of extensive orthogonal validation
- differences in
 - mapping tool
 - candidate-based VS segmented read-based approach
 - filtering
 - ...

METHOD

Open Access

A multi-split mapping algorithm for circular RNA, splicing, trans-splicing and fusion detection

Steve Hoffmann^{1,2,3}, Christian Otto^{1,2,3}, Gero Doose^{1,2,3}, Andrea Tanzer⁴, David Langenberger^{1,2,3}, Sabina Christ⁵, Manfred Kunz⁶, Lesca M Holdt^{3,7}, Daniel Teupser^{3,7}, Jörg Hackermüller^{2,5,8} and Peter F Stadler^{1,2,3,4,9,10,11*}

Resource

Diverse alternative back-splicing and alternative splicing landscape of circular RNAs

large-scale collaborative RT-qPCR benchmarking study of circRNA prediction tools

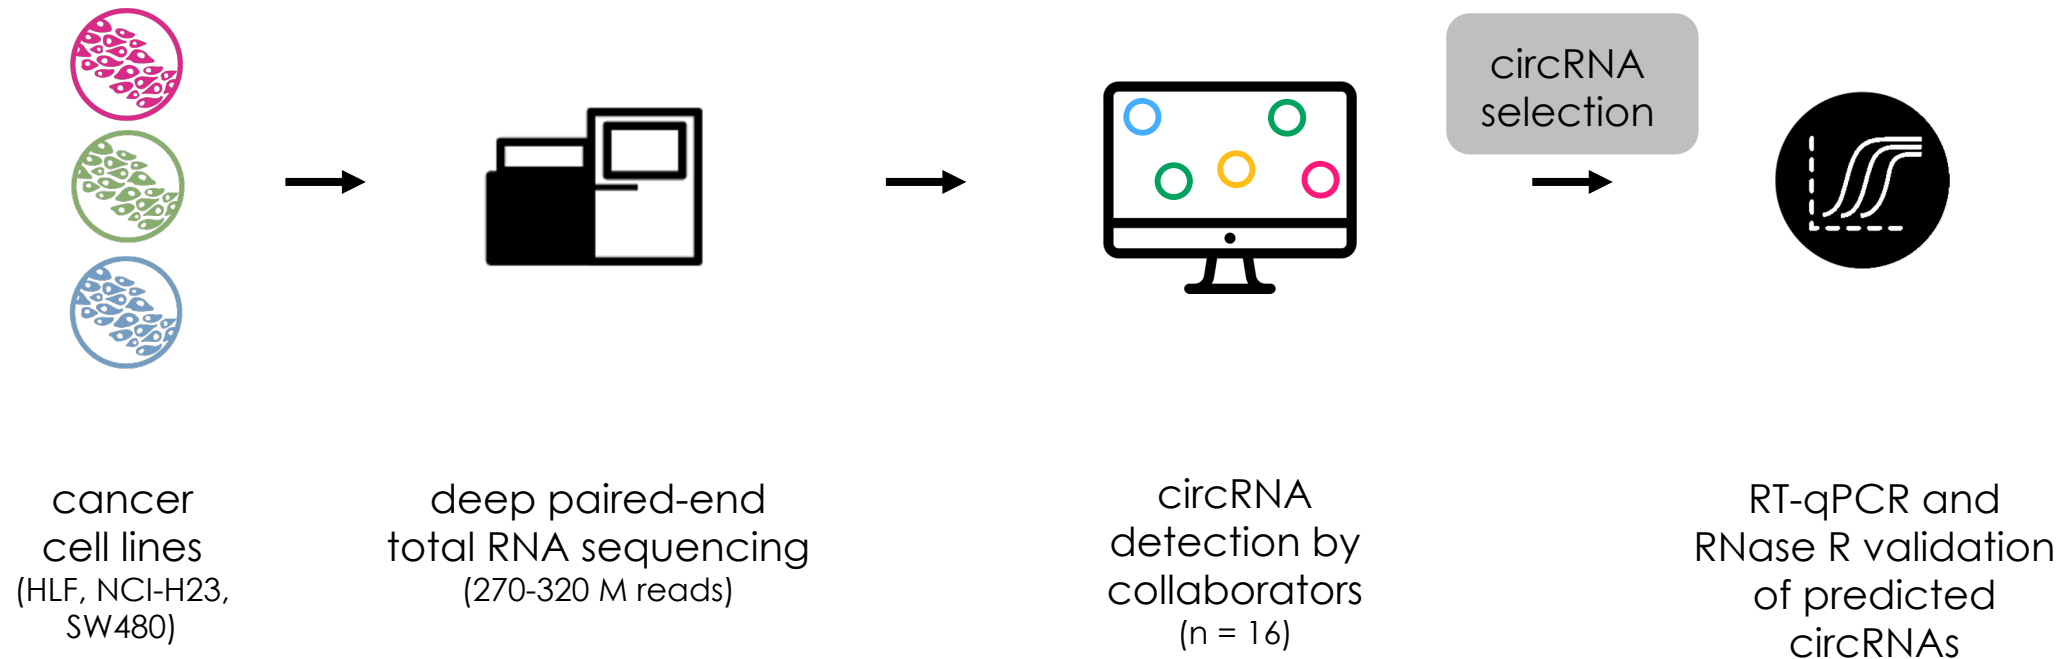

different tools predict a 40-fold difference in nr of circRNAs

different circRNA count distributions and filtering for different tools

large-scale collaborative RT-qPCR benchmarking study of circRNA prediction tools

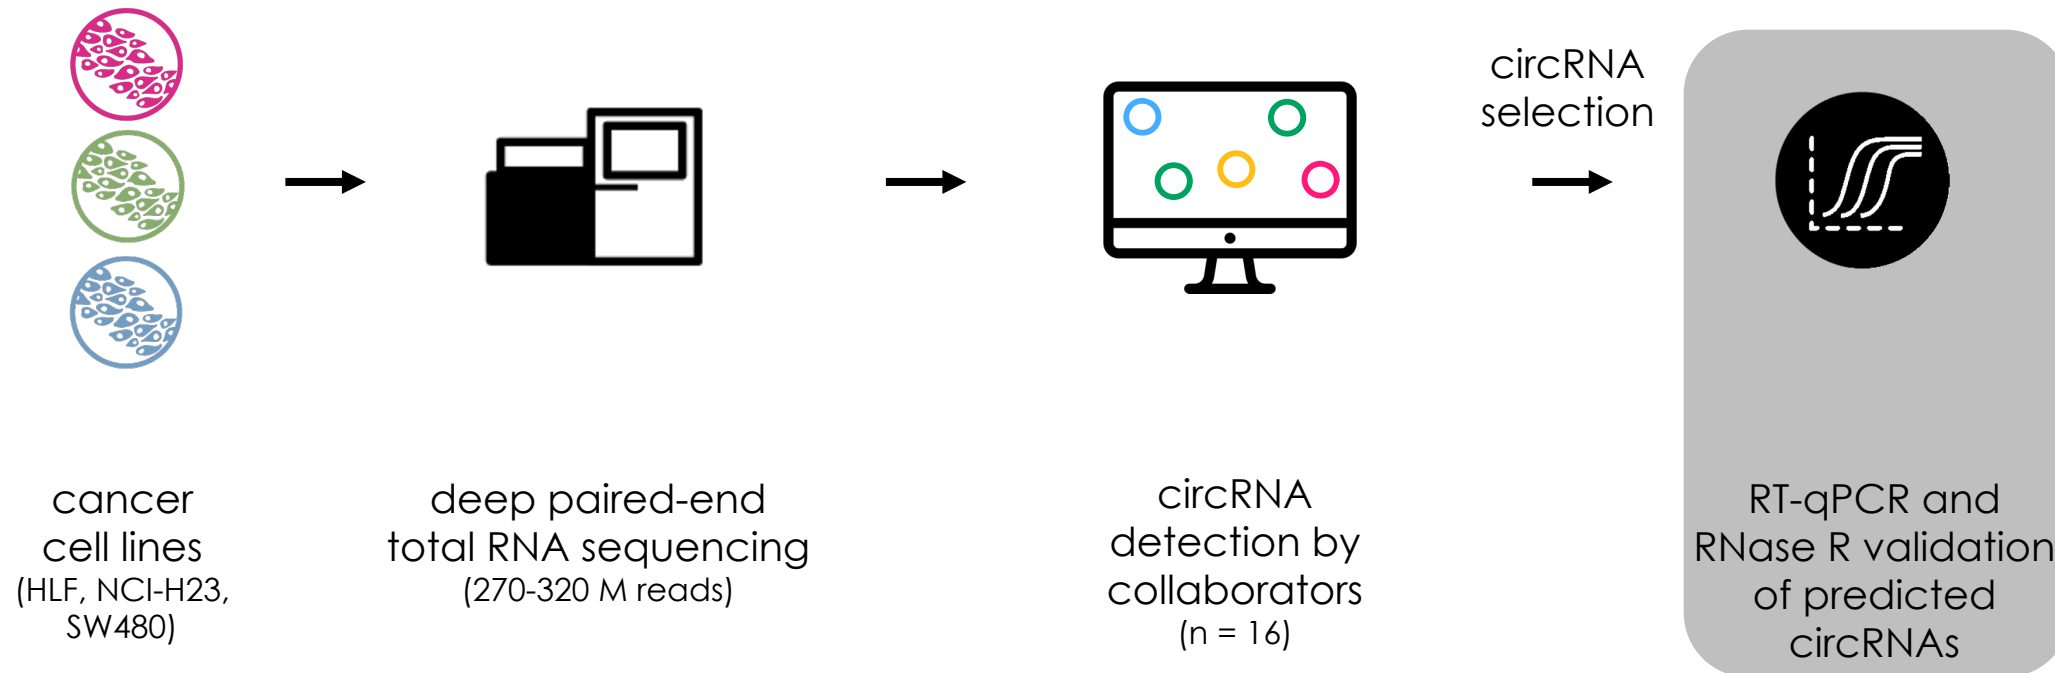

circRNA selection

- random selection of 100 circRNAs per tool
 - 20 circRNAs with BSJ count < 5
 - 80 circRNAs with BSJ count ≥ 5
- 1560 selected circRNAs

tool 9 does not report raw BSJ counts, but only reports TPMs
 \Rightarrow 100 circRNAs were chosen randomly

large-scale collaborative RT-qPCR benchmarking study of circRNA prediction tools

step 1: qPCR validation

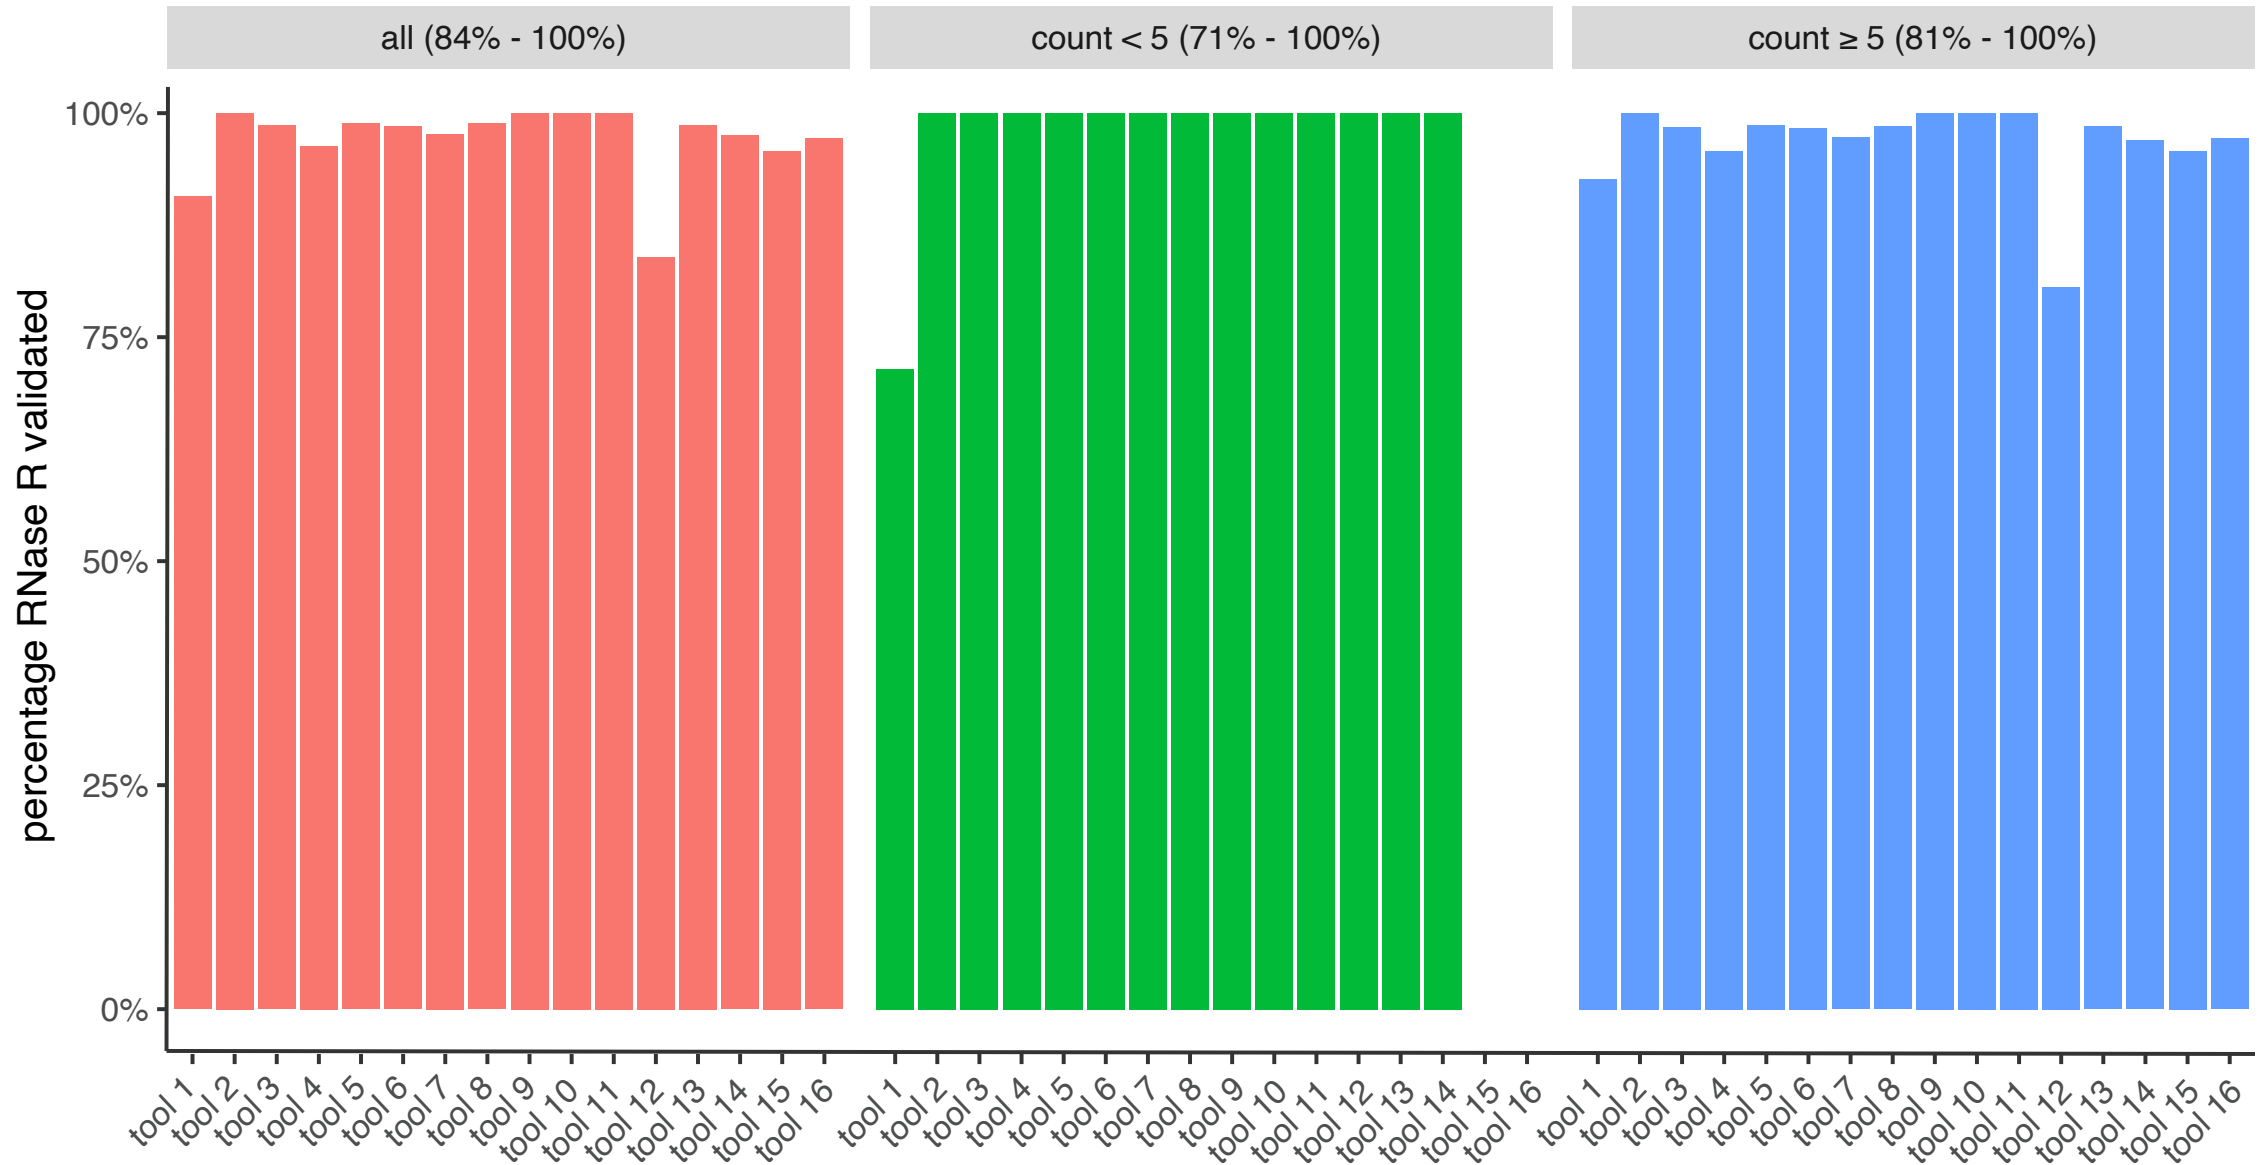

step 2: RNase R validation

- validate that the qPCR target is a true circRNA, and not linear RNA
- RNase R degrades linear RNAs
- validation = $Cq_{\text{treated}} - Cq_{\text{untreated}} > 3$

step 2: RNase R validation

$$\text{validation} = Cq_{\text{treated}} - Cq_{\text{untreated}} > 3$$

combination of qPCR and RNase R validation rates

going back to the first slide

extrapolation to total nr of predicted circRNAs

theoretical nr of true positive circRNAs = total nr of detected circRNAs * combined validation rate

conclusions

- work in progress
 - amplicon sequencing data-analysis
 - overlap between tools
 - combination of tools
- circRNA detection tools generate vastly different numbers of circRNAs
- RT-qPCR and RNase R validation rates are generally quite good
